

The Drin Dialogue process has provoked a series of actions in the MKD side of the Drin Basin concerning future management of the Drin Basin. Initiatives like the GIZ biodiversity project contributed towards protection of the valuable resources in the Basin. So did the GIZ adaptation on Climate changes process.

At the same time MKD Government started implementation of the WFD establishing the river basin unit for all basins including River Crni Drim basin. In the near future River basin Councils will be established using the experience of Prespa Lake sub basin Council. This will include huge involvement of different stakeholders from the Basin. Government through the signing of the MoU showed strong dedication to the process of Joint management of Drin Basin which can be used as a frame while preparation phase of the GEF project is ongoing.
